Abstract

Supply Chain Resilience is at its all-time peak of interest according to google searches. This correlates timely with a series of large-scale disruptive events such as Brexit, COVID-19 and Russia-Ukraine war. All of this has tremendous impact on companies supply chains which need to adapt to manifold challenges which evolve in this new world. Research question is what are doing companies different then before in terms of Supply Chain Resilience and what are the latest trends? There is evidence for increased awareness at management level and broad application of Supply Chain Resilience tools in response of the new situation. This should be taken as a starting point to conduct further research with the objective to review how and which tools companies apply in practice to become more resilient.
